

# PFIZER-BIONTECH COVID-19 VACCINATION SCHEDULE AND DOSING

## FOR IMMUNOCOMPROMISED POPULATIONS

### Pfizer-BioNTech Ages 6 months–4 years

dose/injection volume  
(dilute before use)

**Primary Dose:**  
Maroon Cap

### Pfizer-BioNTech Ages 5 years–11 years

dose/injection volume  
(dilute before use)

**Primary/Booster Dose:**  
Orange Cap

### Pfizer-BioNTech Ages 12 years–17 years

dose/injection volume  
(Do NOT dilute before use)

**Primary Dose:**  
Gray Cap

**Bivalent Booster:**  
Gray Cap (gray label)

### Pfizer-BioNTech Ages 18 years and older

dose/injection volume  
(Do NOT dilute before use)

**Primary Dose:**  
Gray Cap

**Bivalent Booster:**  
PFIZER Gray Cap (gray label) or  
MODERNA Dark Blue Cap (gray label)

\* Complete the primary series with same product. If the vaccine product previously administered cannot be determined or is no longer available, any age-appropriate mRNA COVID-19 vaccine product may be administered at least 28 days after the first dose.

† Persons with a recent SARS-CoV-2 infection may consider delaying a primary series or booster dose by 3 months from symptom onset or positive test (if infection was asymptomatic).

‡ Some studies in adolescents and adults have shown the small risk of myocarditis associated with mRNA COVID-19 vaccines might be reduced and peak antibody responses and vaccine effectiveness may be increased with an interval longer than 4 weeks. An 8-week interval may be optimal for people who are not moderately or severely immunocompromised and ages 6 months–64 years, especially for males ages 12–39 years.
