

TOOLKIT

SECTION 1: PURPOSE OF THIS TOOLKIT

Last Updated November 22, 2022

Funding for this project was made possible by the Office of Disease Control, through the Illinois Department of Public Health.

INTENT

This toolkit is not meant to replace the required trainings healthcare providers and organizations need to complete to be a COVID-19 vaccinator in Illinois. This toolkit is designed to provide information on the different components of what is needed to administer COVID-19 vaccines effectively and efficiently in a variety of clinical settings.

TOOLKIT CONTENTS

In this toolkit you will find information and resources on:

- COVID-19 vaccine administration and distribution (I-CARE, working with local health departments, etc.)
- Operational issues
- Handling and preparation of COVID-19 vaccines
- The post-vaccine process
- Strategies for overcoming vaccine hesitancy through culturally and linguistically appropriate methods
- How to use data to support vaccine uptake

Additionally, you will find information on other resources available to you through the I-VAC program. While historical and exceptional work has been done around COVID-19 vaccination efforts, we have more work to do as vaccinating is the best way to protect people from severe illness and death due to COVID-19. We look forward to supporting you in normalizing COVID-19 vaccines.
